EDUCATION

University of Louisville | B.A. in Computer Science

Dec 2026

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02) | Amazon Web Services
Credential ID: afd04de2-aaf7-45c6-86fb-3a0700c53689

Jul 2026

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript, SQL, HTML, Bash
Development stack: Flask, React, MySQL, Nginx, REST APIs, Git, GitHub, Storybook
Cloud & Infrastructure: AWS (EC2, S3, IAM, Lambda, RDS, VPC, CloudWatch), Linux

SELECTED PROJECTS

A2UI Component Catalog Automation

- Automated the conversion of reusable React and Storybook.js components into A2UI-compatible JSON catalogs, reducing manual configuration for AI-generated interfaces.
- Cataloged more than 100 ShadCN and Material Design 3 components, including higher-level patterns designed for finance and healthcare applications.
- Integrated A2UI Composer with the Gemini API and REST endpoints, enabling searchable component discovery and dynamic interface generation.

AWS Web Application – Car and Driver Database

- Developed and deployed a full-stack web application on AWS EC2 by integrating Flask, MySQL, and Nginx to provide cloud-hosted vehicle and driver management.
- Configured Linux server networking, security groups, and web server deployment to securely host a production-ready application.
- Troubleshoot deployment, networking, and database issues to ensure stable cloud application performance.

Arduino Water Filtration System

- Designed and programmed a C++ microcontroller-based water filtration system that achieved approximately **95% detection accuracy** during testing.
- Simulated real-world turbidity detection by integrating sensor logic into an embedded system prototype.
- Improved filtration decision-making by developing control logic for automated sensor responses.

WORK EXPERIENCE

University of Louisville | *Student Researcher*

Jul 2022 – Aug 2023

- Selected as **1 of 13 students** for the UofL Cancer & Health Disparity Summer Bridge Program.
- Optimized glioblastoma tissue decellularization procedures using scanning electron microscopy, confocal microscopy, and immunostaining.
- Conducted laboratory research that supported ongoing biomedical engineering investigations into brain cancer.

University of Louisville | *Student Researcher*

Jul 2021 – Aug 2021

- Selected as **1 of 25 students** for the competitive Louisville Science Pathway Program.
- Developed and maintained a mutant strain database for *Burkholderia pseudomallei*, improving laboratory organization and accessibility.
- Performed bacterial conjugation and transposon mutagenesis to generate mutant strains for microbiology research.
- Applied antibiotic selection techniques to validate experimental bacterial strains.

ORGANIZATIONS

River Lotus Lion Dance – Lead Dancer

Jan 2023 – Present

Beta Theta Pi – Brother

Jan 2024 – Present
